

FrePPLe is hiring a developer/consultant

Job description

You will be developing production planning software and implementing it at customers.

You'll be working in a small team in an international environment, which gives you lots of room for initiative.

Profile

Candidates will be reviewed along the following dimensions:

- You're familiar with production planning and scheduling. Terms as theory of constraints, supply chain management and lean manufacturing are not unknown to you.
- You're excited to develop software using JavaScript, Python, SQL and C++.
- You have an entrepreneur spirit and are eager to think with us on an innovative open source project and its business model.

You're fluent in English and are willing to travel abroad.

About frePPLe

FrePPLe is a production planning and scheduling application. Many manufacturing companies plan their production using Excel spreadsheets. Our goal is to provide companies that are outgrowing their planning spreadsheets an easy to implement tool to optimize their production.

With over 10.000 yearly downloads from across the world frePPLe is the leading open source application in this domain.
